natural

FARM

The Green Berry project was born from the desire for a challenge by Sergio Laggiard to create a manufacturing company of

small fruits, by innovative methods

accentuating the taste and flavor of the fruit.

The cultivation takes place with maximum respect for the territory and nature. The

greenhouses will be built on an area of around

4500 SQM and the plants will be cultivated using

hydroponic and aquaponic systems, eliminating

any treatment with artificial substances and

using only renewable energy sources, which are

non-polluting and will produce considerable

water saving.

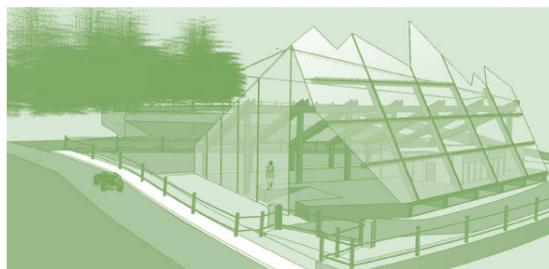

The aromatic and medicinal herbs are cultivated

organically, on an area of around 15000

SQM, in open fields. In line with the

company philosophy, the packaging is

also biodegradable and compostable.
